

PLATE STAR F

Developer and Replenisher

Utilisation

Extremely highly buffered, ready-to-use developer for pre-coated positive offset plates with very short exposure time. Works self cleaning with a high stability for a very long period of time in machines as well as in dip tanks. Very economical if regenerated with **PLATE STAR replenisher**.

Usage

| | dilution | temperature | developing time | recommended replenishment |
|----------|-----------|-------------|-----------------|---|
| machine | undiluted | 22 – 24°C | approx. 20 s | with PLATE STAR replenisher ⁽¹⁾ |
| dip tank | undiluted | 22 – 24°C | 1 – 2 min. | with PLATE STAR replenisher ⁽²⁾ |
| manually | undiluted | 22 – 24°C | --- | --- |

⁽¹⁾ Regeneration with **Plate Star Replenisher** : According to the type of machine (dip machine : 30-50 ml/m² / spaymachine 50-80 ml/m²). We recommend to check the solution by measuring aids.

⁽²⁾ Refill manually with undiluted developer until normal first filling level is reached.

Packaging

PLATE STAR F developer

10 litres ready-to-use developer in PE-can

Art.-No. 106522

PLATE STAR replenisher
